No. 888 Qianshan Road, Zhengwu District, Hefei, China

## WELCOME TO HEFEI

Welcome to the Joint CSHP-EA4HP-SH Workshop 2024! The workshop is organized by a partnership of the Chinese Society for Hematopathology (CSHP), European Association for Haematopathology (EA4HP), and Society for Hematopathology (SH). The Joint Workshop will take place on April 13-14, 2024, at the InterContinental Hotel in Hefei, Anhui, P.R.China.

The topic is "Histiocytic/Dendritic Cell Proliferations, Neoplasms, and Mimics". In addition to Sessions focused on given categories of the topic, there will be one Session designated specifically for Multidisciplinary Case Discussions. This Joint Workshop is a historic event, which symbolizes the scientific collaborations of the three societies.

## EDUCATIONAL OBJECTIVES

The Workshop will focus on the following goals and overarching objectives:

- Illustrate overlapping features and diagnostic challenges of histiocytic/dendritic cell proliferations, neoplasms, and mimics;
- Identify molecular genetics that may distinguish histiocytic/dendritic cell reactive proliferations from their neoplastic counterparts;
- Elucidate and expand the diagnostic criteria set by recent classification schemes with a view to informing future classifications;
- Develop consensus recommendations in approaches to distinguishing the histiocytic/dendritic cell proliferations and neoplasms with overlapping features.

## TARGET AUDIENCE

This conference is designed for Hematopathologists, Hematologist, Dermatopathologists, Dermatologists, Oncologists, General pathologists, and Pathologists of other subspecialties.

## EDUCATIONAL METHODS

Lectures, Case Presentations, Multidisciplinary Case Presentations and Discussions, Questions and Answers.

## Case Types

- Reactive proliferations of macrophages and dendritic cells that mimic histiocytosis;
- Hemophagocytic lymphohistiocytosis (HLH) including cases secondary to hematolymphoid neoplasms;
- Langerhans cell and other histiocytoses (e.g. ECD, JXG, RDD, MRH, ALK+ histiocytosis), including cases with features overlapping between different entities (so-called "mixed histiocytoses") (cases of solitary JXG and reticulohistiocytoma excluded).
- BPDCN and plasmacytoid dendritic cell proliferations associated with myeloid neoplasms;
- Malignant histiocytosis (e.g. histiocytic sarcoma, follicular dendritic cell sarcoma, Langerhans cell sarcoma, interdigitating dendritic cell sarcoma etc), including cases illustrating issues in assigning cell of origin and difficulties in assessing malignant potential."

## Case Features

The Workshop will focus on cases with one or more of the following features:

- Exemplary demonstration of various subtypes of histiocytic/dendritic cell proliferations and neoplasms using multidisciplinary correlations;
- Borderline cases illustrating morphologic and immunophenotypic overlaps of various subtypes of histiocytic/dendritic cell neoplasm;
- Transdifferentiation of histiocytic/dendritic cell neoplasms from the associated lymphomas/leukemias;
- Rare histiocytic/dendritic cell neoplasms with unusual clinical, morphologic, immunophenotypic, or genetic features.
